

# AI Product Team Handbook

## 1. Company Overview

NovaAI builds AI-powered productivity tools for small and medium-sized businesses, focusing on large language models, workflow automation, and document intelligence.

## 2. Remote Work Policy

Employees may work remotely up to four days per week. At least one day per week is a collaboration day. Employees should remain available between 10:00 AM and 4:00 PM local time for meetings and collaboration.

## 3. Engineering Workflow

Engineering teams use GitHub for version control and pull requests for code review. Every production change should receive at least one review from another engineer. New features should include automated tests when practical. Major architecture changes must be documented before implementation.

## 4. AI Development Guidelines

AI-generated code may be used as a development aid, but engineers remain responsible for reviewing and testing it. Sensitive company information must not be entered into public AI tools. Production LLM features should be evaluated for reliability, latency, cost, security, and failure cases before deployment.

## 5. Time Off

Full-time employees receive 20 paid vacation days per calendar year. Vacation requests should normally be submitted at least five business days in advance. Unused vacation days may be carried over for up to three months into the following year.

## 6. Support

For technical issues, employees should first contact their team lead. For account or access problems, employees should contact IT support through the internal support portal.
